What Is Wellbeing?

Wellbeing is about how we are doing as *individuals* and *communities* and, in turn, how that makes us feel about the way *our* lives are going.
Our wellbeing and the wellbeing of our families and community is what ultimately matters.

A recent large-scale survey shows that more than three-quarters (78%) of people globally now feel strongly that happiness and wellbeing should be prioritized over money.*

This demand for change is championed by younger members of society, with the 25-34-year-old age group representing the highest percentage of responses in favor of change.

Creating the best possible conditions for wellbeing is not just the right thing to do philosophically — it is also the smart thing to do, since happier individuals live longer and healthier lives, are more pro-social and more productive, and show greater support for incumbent government leaders.

*Unilever Wall’s 2020 Happiness Research
Wellbeing as the North Star in Evidence-Based Policymaking

The scientific study of wellbeing has made much progress over the past few decades and is now sufficiently developed to make population wellbeing a feasible policy aim.

THREE OBVIOUS POLICY USES FOR WELLBEING DATA STAND OUT:

01 To monitor progress in terms of the wellbeing of people
02 To serve as a basis for policy formulation and prioritization given limited budget resources
03 To inform policy evaluation

Wellbeing measurement naturally lends itself to being the overarching North Star or “common currency” that brings together policy action on essential drivers of wellbeing, such as health, education, economic opportunities and racial equity.
The primary measure for wellbeing asks survey respondents to evaluate the quality of their life. This is normally done by asking respondents to rate their life satisfaction on a scale from 0 to 10.

The Gallup survey asks the following variant of the life satisfaction question:

“Please imagine a ladder with steps numbered from zero at the bottom to ten at the top. The top of the ladder represents the best possible life for you and the bottom of the ladder represents the worst possible life for you. On which step of the ladder would you say you personally feel you stand at this time?”
How to Measure Wellbeing?

Secondary measures for wellbeing also survey optimism and positive and negative emotions.

**Predicted future life satisfaction:**

Ask the life ladder question followed by,

“On which step do you think you will stand about five years from now?”

**NEGATIVE AFFECT**

“Did you experience the following feelings during a lot of the day yesterday? How about __________?”

**MEAN OF // STRESS & WORRY**

**POSITIVE AFFECT**

“Did you experience the following feelings during a lot of the day yesterday? How about __________?”

**MEAN OF // ENJOYMENT & HAPPINESS**

Wellbeing Driver Analysis

WHAT FACTORS BEST EXPLAIN DIFFERENCES ACROSS PEOPLE IN WELLBEING IN ATLANTA?
What Makes People (Un)happy in Atlanta?

City of Atlanta

- Work and Employment: 17.5%
- Safety: 2.0%
- Purpose: 17.9%
- Personal Relationships: 12.6%
- Personal Finances: 22.4%
- National Economy: 2.5%
- Health Status: 8.3%
- Health Behaviors: 5.2%
- Community: 7.9%
- Access to Healthcare: 3.7%

About 40% of the variance in wellbeing across Atlanta is explained by way of employment and personal finances.

Community and personal relationships explain about 20%.

Purpose and health-related drivers each explain about 18%.
What Makes People (Un)happy in Atlanta?

About 40% of the variance in wellbeing across Atlanta is explained by way of employment and personal finances.

Community and personal relationships explain about 20%.

Purpose and health-related drivers each explain about 18%.
Drivers of Wellbeing Over the Life Course

Work and employment are particularly important to the wellbeing of the young (aged 18-30).

Personal finances matter most to the middle-aged.

Health, access to healthcare, and a sense of purpose become more important for those 60 and older.
Drivers of Wellbeing by Ethnicity

Feeling safe and secure matters almost twice as much for African Americans. Access to healthcare and health status matter more to White Americans.

Work and employment are even more important in driving wellbeing among African Americans.
Appendix

A | DRIVER ANALYSIS METHODOLOGY AND VARIABLE GROUPINGS

B | DATA CAVEATS
We use Gallup National Health and Well-Being Index data from the City of Atlanta.

- 93 ZIP codes are associated with the city.
- Data from 2013 onwards is used for driver analysis.

Data is divided into broad categories or groupings to reduce the dimensionality of the analysis.

We conduct a relative importance analysis.

- This is often referred to as a “Shapley Value” analysis or “dominance analysis.”
- This analysis decomposes the $R^2$ statistic for a linear regression model predicting life satisfaction today.
- In this iterative process, we bind together variables within the 10 broad categories outlined below.
- In all models during this iterative process, we hold constant demographics:
  - age, age$^2$, gender, race, education, number of children in the household
Variable Groupings and Question Wordings

**National Economy**
How would you rate economic conditions in this country today — as excellent, good, only fair or poor?
Right now, do you think that economic conditions in this country, as a whole, are getting better or getting worse?

**Personal Finances**
Annual Household Income
In the last seven days, I have worried about money.
I have enough money to do everything I want to do.
Have there been times in the past twelve months when you did not have enough money to buy food that you or your family needed?

**Work and Employment**
Employment Status
At work, do you get to use your strengths to do what you do best every day, or not?
Does your supervisor at work treat you more like he or she is your boss or your partner?
Does your supervisor always create an environment that is trusting and open, or not?
Could you tell me the general category of work you do in your primary job?
In the last seven days, I have felt active and productive every day.

**Safety**
I always feel safe and secure.

**Health Status**
Would you say your own health, in general, is … Excellent, Very good, Good, Fair, Poor?
Have you ever been told by a physician or nurse that you have any of the following, or not? How about __________?
BMI greater than or equal to 30 (derived from height and weight)
Do you have any health problems that prevent you from doing any of the things people your age normally can do?
My physical health is near-perfect.
Over the last two weeks, how often have you had little interest or pleasure in doing things, nearly every day, more than half the days, several days or not at all?
How often do you use drugs or medications, including prescription drugs, which affect your mood and help you relax, almost every day, sometimes, rarely or never?
Variable Groupings and Question Wordings (cont.)

Access to Healthcare

Have there been times in the past twelve months when you did not have enough money to pay for health care and/or medicines that you or your family needed?

Have you visited a dentist in the last 12 months?

Do you have a personal doctor?

Do you have health insurance coverage?

In the city or area where you live, is it easy or not easy to get medicine?

Health Behaviors

Do you smoke?

In the last seven days, on how many days did you exercise for 30 or more minutes?

In the last seven days, on how many days did you have five or more servings of fruits and vegetables?

Did you eat healthy all day yesterday?

Personal Relationships

Your relationship with your spouse, partner, or closest friend is stronger than ever.

Someone in your life always encourages you to be healthy.

Your friends and family give you positive energy every day.

Community

You are proud of your community or the area where you live.

In the last 12 months, you have received recognition for helping to improve the city or area where you live.

The city or area where you live is a perfect place for you.

You can't imagine living in a better community than the one you live in today.

Are you satisfied or dissatisfied with the city or area where you live?

Purpose

You like what you do every day.

You learn or do something interesting every day.

In the last 12 months, you have reached most of your goals.
MISSINGNESS | To deal with issues surrounding nonresponse and missing data, we use multiple imputation.
- We impute using multivariate normal regression.
- We impute 10 datasets.
- We adjust coefficients (and standard errors) for the variability between imputations according to the combination rules by Rubin (1987).
- We use Stata 16 in order to conduct this analysis.
- Life satisfaction (today and in 5 years) stopped being collected at the end of 2017. There is nothing we can do about this.

WEIGHTING | Data is unweighted in all of our analyses.
- Weights for a single city are not available.
- The data are not perfectly representative of the target population.
- City-specific surveying will deal with this better.
- National weights are available but weighting with these weights may be just as biased as unweighted data since the target population is very different.
- This is not a “defect” of the data: the daily poll was designed to be representative of the U.S. as a whole, not of the city of Atlanta.

STANDARD ERRORS/CONFIDENCE INTERVALS | Dominance analysis does not produce standard errors in a “standard” way, as in a linear regression. To calculate standard errors, we bootstrap the (multiply imputed) dominance analysis procedure.
- We run 500 iterations to bootstrap confidence intervals around our estimates.
